

Installing or Updating the UDOT Field Book Application

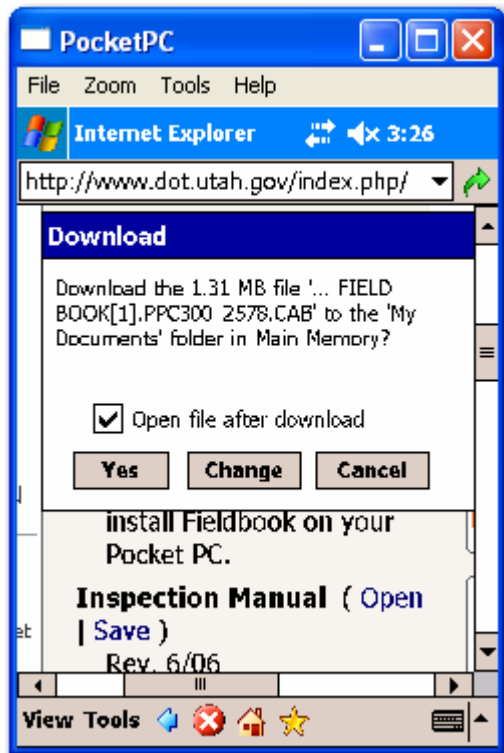

IMPORTANT: The iPAQ must be connected to the internet via your cradle and activesynch or via an ethernet card or modem.

You must Close the Fieldbook Application and ensure that it is not running in the background before beginning a New Install or Upgrade or you may get more than one icon in your start menu. (If this happens you must uninstall all fieldbook applications and reinstall the latest application)

1. Once you have done this tap the **'Start Menu'**
2. Tap **'Internet Explorer'**

3. Use keyboard to type in the Construction Fieldbook Website URL:
<http://www.dot.utah.gov/index.php/m=c/tid=448>
4. Tap **'Fieldbook Application'** and **'Save'**

5. Leave **'Open file after download'** check and click **'Yes'** to download the application to your iPAQ and start installation.

6. Tap **'Start'** menu and go to the **'UDOT Field Book'** link in the menu.

If the Link is not in the main menu then click **'Programs'** and the icon will appear in your list of available programs.
